Context and decision record

Lumen Initiative 001 develops Lumen Document Discovery 001 for research teams at Cedar Pilot Organization 001. The workflow helps users find approved source passages. This document covers the requirements specification and gives the team a stable reference for decisions about document discovery. The current review priority is quality; that priority is a stated preference, not a numeric performance claim.

The specification defines a normal path, an empty state, a validation failure, and a recoverable service error. Every requirement has an owner and an observable outcome. The implementation team may change internal details, but a changed user-visible behavior requires an explicit decision record.

Dependencies are tracked at the interface level so work can proceed in parallel. A requirement is incomplete when its data source, refresh behavior, or error response remains unspecified. The reviewer will ask for those details before treating a screen mockup as an implementable agreement.

For this project, the team will inspect Lumen 001 Interface and retain the source records behind each material finding. This record must be read using its recorded publication time. Follow-up decisions should identify their assumptions, the person responsible, and the observable condition that would change the recommendation. The document is intentionally part of a fictional evaluation corpus and contains no private customer data.

Evidence statements

S01 Ava Cedar (001, synthetic) specifies Lumen Initiative 001.

S02 Lumen Document Discovery 001 depends on Lumen 001 Interface for the requirements specification scope.

S03 Cedar Pilot Organization 001 participates in the requirements specification for Lumen Initiative 001.

S04 Delivery Team 01 operates Lumen 001 Interface.

S05 Lumen 001 Interface is part of Lumen Document Discovery 001.
