Context and decision record

Lumen Initiative 001 develops Lumen Document Discovery 001 for research teams at Cedar Pilot Organization 001. The workflow helps users find approved source passages. This document covers the accessibility review and gives the team a stable reference for decisions about document discovery. The current review priority is quality; that priority is a stated preference, not a numeric performance claim.

The review covers keyboard navigation, focus order, readable labels, and useful announcements when work finishes or fails. Loading indicators explain what is happening and offer cancellation where cancellation is supported. Color is supplementary information rather than the only way to distinguish outcomes.

The pilot coordinator will repeat the primary task with reduced motion and a larger text setting. A visual improvement is accepted only after the task remains understandable in those modes. Any unresolved issue is recorded with a reproduction path and the specific interaction it affects.

For this project, the team will inspect Lumen 001 Job Queue and retain the source records behind each material finding. This record must be read using its recorded publication time. Follow-up decisions should identify their assumptions, the person responsible, and the observable condition that would change the recommendation. The document is intentionally part of a fictional evaluation corpus and contains no private customer data.
