Context and decision record

Lumen Initiative 001 develops Lumen Document Discovery 001 for research teams at Cedar Pilot Organization 001. The workflow helps users find approved source passages. This document covers the acceptance test plan and gives the team a stable reference for decisions about document discovery. The current review priority is quality; that priority is a stated preference, not a numeric performance claim.

The acceptance plan is written before the final implementation is evaluated. It includes representative examples, boundary conditions, and a case that must stop because the required evidence is missing. The expected outcome is stored separately from the input material supplied to the implementation.

A failed check remains failed even when the interface produces a plausible explanation. Reviewers inspect the actual record, response, or artifact. Tests that merely repeat the implementation logic are replaced by checks against the user outcome and the agreed external contract.

For this project, the team will inspect Lumen 001 Audit Store and retain the source records behind each material finding. This record must be read using its recorded publication time. Follow-up decisions should identify their assumptions, the person responsible, and the observable condition that would change the recommendation. The document is intentionally part of a fictional evaluation corpus and contains no private customer data.
